

## Accelerate medical review processes with intelligent, high-speed document viewing

Many of today's healthcare and life sciences organizations face challenges with quickly and effectively viewing and reviewing large, multi-paged clinical files. Slow-loading systems result in review process bottlenecks – especially when collaborating on high-volume files.

Clinical professionals rely on fast, secure access to high-priority files of different formats, from any device, as and when needed. ARender helps life sciences organizations and healthcare professionals easily view and collaborate on sensitive, high-volume documents, and streamline review and approval workflows during clinical trial and medical review processes.

### Improve Clinical Workflow Efficiency

Medical professionals need fast, secure access to high-priority, high-volume clinical files of different formats, as and when needed.

ARender provides lightning-fast access to even the most sensitive, high-volume files – significantly reducing the time spent opening documents. Once the document is open, users can securely view, annotate, and collaborate to streamline review and approval workflows during clinical trial processes.

### Accelerate Regulatory Processes

Collating the required documents, records, and data from various content systems and in various file formats to prepare submissions for authorization is a tedious task, with the added challenge of protecting personally identifiable information (PII) and sensitive medical records and data.

ARender lets you streamline the collection, organization, and monitoring of information for regulatory submissions, all while ensuring the security of sensitive information.

### Enhance User Performance and Productivity

Medical researchers and clinicians need streamlined viewing, editing, and sharing capabilities – all of which are available via ARender's powerful web-based solution. ARender gives sponsors, CROs, and medical sites the ability to collaborate on clinical documentation by highlighting text, circling content, adding notes, and replying to comments in real-time.

### Streamline IT Costs and Processes

The ARender solution uses streaming technology to display documents in milliseconds – whatever the file size, and using a fraction of the bandwidth and data download compared to traditional viewers. Users only need a web browser, reducing hardware requirements, eliminating the need for costly desktop software, and significantly dropping overall IT costs.

### Ensure Complete Information Security and Compliance

Meeting strict compliance regulations like HIPAA, GDPR and ISO can require hefty IT overhead.

ARender's solution sits on top of your existing IT systems and clinical platforms for seamless, centralized control over all information, enabling secure, compliant document review processes.
